

A specification of Tic-Tac-Toe in the Behavioral Programming style, after Harel et al., *CACM* 2012, <http://www.wisdom.weizmann.ac.il/~harel/papers/Behavioral%20programming%20.pdf>

The idea of Behavioral Programming is that specifications be constructed iteratively and interactively, by gradually adding rules, each specifying a “*b*-thread” (which corresponds to a TLA+ formula, not a TLA+ behavior), and allowing verification at each stage. The rules below do not follow precisely those of Harel, but they follow them in spirit; the variables and definitions below are therefore introduced as needed. The properties defined after each rule can be verified in the model checker before the following rules are defined, thus forming an incremental style of specification.

The goal of this specification is to examine the viability of specifying in the bahvioral programming style in TLA+.

Historical note

In the 1830s (probably, he does not provide a date), having become convinced that “every game of skill is susceptible of being played by an automaton,” and after contemplating chess and finding it too taxing, Charles Babbage decided to build a machine that would play Tic-Tac-Toe (“the simplest game with which I am acquainted”) against itself, “surrounded with such attractive circumstances that a very popular and profitable exhibition might be produced” that would raise money to fund his Analytical Engine, which would have been, had it been built, the first general purpose computer. Not only was the first computer able to play the game over one hundred years away, Babbage would not have been able to write a formal specification similar to the one below. George Boole’s algebra would be invented only some years later, based on Babbage’s (and George Peacock’s) pioneering work in abstract algebra, and formal logic as we know was forty or fifty years away. Babbage would not have been pleased with the following specification, which would have made the attractive animatronic effects he had planned redundant, as the play tactics always lead to a draw.

(see Charles Babbage, *Passages from the Life of a Philosopher*, 1864)

Conclusions

Rules 1-3, which specify the rules of the game, feel a bit contrived specified in the behavioral way, however, specifying them in this way felt quite easy, allowing to focus on one concept at a time. Rules 4-7, containing the play tactics, are a natural fit for the behavioral style, but in this particular specification, because they have no state or temporal features of their own, would have been just as easily composed in the ordinary specification style. However, one can easily imagine temporal rules, which may benefit from the behavioral style. While the result is not conclusive, I think the style deserves further consideration. Some changes to TLC (based on the comments inline, especially with regards to creating the conjoined specification can make the experience more pleasant, by allowing a more elegant, less tedious way of enabling and disabling some of the rules to examine their effect.

53 EXTENDS *Naturals*, *FiniteSets*

1. Board: At each step, an X or an O is marked on the board

60 VARIABLE $board, pretty_board$
61 $v1 \triangleq \langle board, pretty_board \rangle$

63 $N \triangleq 3$
64 $Empty \triangleq \text{"-"}$
65 $Player \triangleq \{\text{"X"}, \text{"O"}\}$
66 $Mark \triangleq Player$
67 $Square \triangleq \{Empty\} \cup Player$

69 $BoardType \triangleq \wedge board \in [(1 \dots N) \times (1 \dots N) \rightarrow Square]$ This is more convenient
70 $\wedge pretty_board \in [1 \dots N \rightarrow [1 \dots N \rightarrow Square]]$ Displayed more nicely in TLC output

72 $Pretty(b) \triangleq [x \in 1 \dots N \mapsto [y \in 1 \dots N \mapsto b[x, y]]]$

74 $BoardFull \triangleq \forall i, j \in 1 \dots N : board[i, j] \neq Empty$

76 $Init1 \triangleq \wedge board = [i, j \in 1 \dots N \mapsto Empty]$
77 $\wedge pretty_board = Pretty(board)$

79 $Next1 \triangleq \wedge \exists i, j \in 1 \dots N, mark \in Mark : \wedge board[i, j] = Empty$
80 $\wedge board' = [board \text{ EXCEPT } ![i, j] = mark]$
81 $\wedge pretty_board' = Pretty(board')$

83 $Board \triangleq Init1 \wedge \Box [Next1]_{v1}$

85 $TicTacToe1 \triangleq Board$

87 Properties we can state at this point:
88 THEOREM $Board \Rightarrow BoardType$

90 $OnceSetAlwaysSet \triangleq$
91 $\forall i, j \in 1 \dots N : \exists mark \in Mark : board[i, j] = mark \Rightarrow \Box (board[i, j] = mark)$
92 THEOREM $TicTacToe1 \Rightarrow OnceSetAlwaysSet$

132 |

3. *DetectWin*: Detect win or draw and end game

136 VARIABLE *win*

137 $v3 \triangleq \langle v2, win \rangle$

139 $Result \triangleq Player \cup \{ \text{"Draw"} \}$

140 $WinType \triangleq win \in \{ Empty \} \cup Result$

141 $GameEnd \triangleq win \in Result$

143 $Line \triangleq \{ [i \in 1 \dots N \mapsto \langle i, y \rangle] : y \in 1 \dots N \}$ horizontal

144 $\cup \{ [i \in 1 \dots N \mapsto \langle x, i \rangle] : x \in 1 \dots N \}$ vertical

145 $\cup \{ [i \in 1 \dots N \mapsto \langle i, i \rangle] \} \cup \{ [i \in 1 \dots N \mapsto \langle i, N - i + 1 \rangle] \}$ diagonal

147 $f \circ g \triangleq [x \in \text{DOMAIN } g \mapsto f[g[x]]]$

148 $BoardLine(line) \triangleq board \circ line$

150 $Won(player) \triangleq \exists line \in Line : BoardLine(line) = [i \in 1 \dots N \mapsto player]$

151 $NoWin \triangleq \neg \exists player \in Player : Won(player)'$

152 $StopGame \triangleq board' = board \text{ UNCHANGED } board - \text{ fails } TLC$

154 $Init3 \triangleq win = Empty$

155 $Next3 \triangleq \vee \wedge win = Empty$

156 $\wedge \vee \exists player \in Player : Won(player)' \wedge win' = player$

157 $\vee NoWin \wedge BoardFull' \wedge win' = \text{"Draw"}$

158 $\vee NoWin \wedge \neg BoardFull' \wedge \text{UNCHANGED } win$

159 $\vee \wedge win \in Player$

160 $\wedge \text{UNCHANGED } win$

161 $\wedge StopGame$

163 $DetectWin \triangleq Init3 \wedge \Box[Next3]_{v3}$

165 $TicTacToe3 \triangleq TicTacToe2 \wedge DetectWin$

167 Properties we can state at this point:

168 THEOREM $DetectWin \Rightarrow WinType$

170 $GameEndsWhenPlayerWins \triangleq \Box(win \in Player \Rightarrow \Box[board' = board]_{v3})$ (Temporal formulas containing actions must be of fo

171 $GameEndsWhenPlayerWins \triangleq \Box[(win \in Player \Rightarrow \text{UNCHANGED } board)]_{v3}$ SANY wants parentheses

172 THEOREM $TicTacToe3 \Rightarrow GameEndsWhenPlayerWins$

174 $AtLeast5TurnsToWin \triangleq win \neq Empty \Rightarrow turn \geq 2 * N - 1$

175 THEOREM $TicTacToe3 \Rightarrow \Box(AtLeast5TurnsToWin)$

177 $GameEndsWhenBoardFull \triangleq BoardFull \Rightarrow GameEnd$

178 THEOREM $TicTacToe3 \Rightarrow \Box(GameEndsWhenBoardFull)$

4. *AddThirdToWin*: Add third mark to win

So far, we've specified the rules of the game. Now we start adding tactic rules. This one says that if a player has two marks in a line they should place the third to win.

But we run into a problem: the tactics may be contradictory, and prioritization is required. *b*-threads can be prioritized, and we could simulate that mechanism with with maps of boolean functions, but that would be overly clever, especially in a simple specification such as this. Instead, we'll order the rules by their priority, and explicitly model priorities. This means that new rules would need to be inserted in the sequence of rules into their right position.

195 $Count(mark, line) \triangleq Cardinality(\{i \in 1..N : BoardLine(line)[i] = mark\})$

197 $CanWin(player) \triangleq \exists line \in Line : \wedge Count(player, line) = N - 1$
 198 $\wedge Count(Empty, line) = 1$

200 $MarkLast(line) \triangleq \exists i \in 1..N : \wedge BoardLine(line)[i] = Empty$
 201 $\wedge board'[line[i]] = current$

203 $v4 \triangleq v3$

204 $Init4 \triangleq TRUE$

205 $Next4 \triangleq CanWin(current) \Rightarrow$

206 $\exists line \in Line : Count(current, line) = N - 1 \wedge MarkLast(line)$

208 $Priority1 \triangleq CanWin(current)$

210 $AddThirdToWin \triangleq Init4 \wedge \Box[Next4]_{v4}$

212 $TicTacToe4 \triangleq TicTacToe3 \wedge AddThirdToWin$

214

5. *BlockOpponentFromWinning*: Block the other player if they're about to win

219 $v5 \triangleq v4$

220 $Init5 \triangleq TRUE$

221 $Next5 \triangleq CanWin(Opponent) \wedge \neg Priority1 \Rightarrow$

222 $\exists line \in Line : Count(Opponent, line) = N - 1 \wedge MarkLast(line)$

224 $Priority2 \triangleq Priority1 \vee CanWin(Opponent)$

226 $BlockOpponentFromWinning \triangleq Init5 \wedge \Box[Next5]_{v5}$

228 $TicTacToe5 \triangleq TicTacToe4 \wedge BlockOpponentFromWinning$

229

230

231 |

236 $CenterSquare \triangleq \langle (N+1) \div 2, (N+1) \div 2 \rangle$
237 $CenterFree \triangleq board[CenterSquare] = Empty$

239 $v6 \triangleq v5$
240 $Init6 \triangleq TRUE$
241 $Next6 \triangleq (CenterFree \wedge \neg Priority2) \Rightarrow board'[CenterSquare] = current$

243 $Priority3 \triangleq Priority2 \vee CenterFree$

245 $MarkCenterIfAvailable \triangleq Init6 \wedge \Box[Next6]_{v6}$

247 $TicTacToe6 \triangleq TicTacToe4 \wedge MarkCenterIfAvailable$

249 Properties we can state at this point:

251 $FirstMarksSquare \triangleq turn = 1 \Rightarrow board[CenterSquare] \neq Empty$
252 THEOREM $TicTacToe6 \Rightarrow \Box(FirstMarksSquare)$

254 |

259 $CornerSquares \triangleq \{1, N\} \times \{1, N\}$
260 $CornerFree \triangleq \exists corner \in CornerSquares : board[corner] = Empty$

262 $v7 \triangleq v6$
263 $Init7 \triangleq TRUE$
264 $Next7 \triangleq (CornerFree \wedge \neg Priority3) \Rightarrow$
265 $\quad \exists corner \in CornerSquares : \wedge board[corner] = Empty$
266 $\quad \wedge board'[corner] = current$

268 $Priority4 \triangleq Priority3 \vee CornerFree$

270 $MarkCornerIfAvailable \triangleq Init7 \wedge \Box[Next7]_{v7}$

272 $TicTacToe7 \triangleq TicTacToe6 \wedge MarkCornerIfAvailable$

274 Properties we can state at this point:

276 $SecondMarksCorner \triangleq turn = 2 \Rightarrow \exists corner \in CornerSquares : board[corner] \neq Empty$
277 THEOREM $TicTacToe7 \Rightarrow \Box(SecondMarksCorner)$

279 The tactics are sufficient to always force a draw
280 $AlwaysDraw \triangleq (win \notin Player)$
281 THEOREM $TicTacToe7 \Rightarrow \Box AlwaysDraw$

282 |

The conjoined spec. In this particular spec a conjuncton of $WF_{vi}(\text{Nexti})$ would work, but as this is not true in general for BP systems, we only specify liveness for the canonical representation.

288 $TicTacToe \triangleq TicTacToe7$

A mechanical translation of *TicTacToe* into a specification that TLC can handle follows, based on the equivalences $\Box A \wedge \Box B \equiv \Box(A \wedge B)$, $\Box[A]_x \equiv \Box(A \vee \text{UNCHANGED } x)$ and propositional logic equivalences (distributivity of conjunction over disjunction).

In the case of this particular specification, a simpler composition may have sufficed, but I wanted to see how convenient the general mechanical composition would be. Also,

299 $Compose(\text{NextA}, \text{UnchA}, \text{NextB}, \text{UnchB}) \triangleq \vee \text{NextA} \wedge \text{NextB}$
 300 $\vee \text{NextA} \wedge \text{UnchB}$
 301 $\vee \text{UnchA} \wedge \text{NextB}$
 302 $\vee \text{UnchA} \wedge \text{UnchB}$

UNCHANGED causes an error, as well as the use of variable sequences, as in $v2' = v2$. If fixed, the previous definition could be made nicer, and the following *Unch* definitions made redundant.

309 $\text{Unch1} \triangleq \text{board}' = \text{board} \wedge \text{pretty_board}' = \text{pretty_board}$
 310 $\text{Unch2} \triangleq \text{turn}' = \text{turn} \wedge \text{current}' = \text{current} \wedge \text{Unch1}$
 311 $\text{Unch3} \triangleq \text{win}' = \text{win} \wedge \text{Unch2}$
 312 $\text{Unch4} \triangleq \text{Unch3}$
 313 $\text{Unch5} \triangleq \text{Unch4}$
 314 $\text{Unch6} \triangleq \text{Unch5}$
 315 $\text{Unch7} \triangleq \text{Unch6}$

317 $\text{Next12} \triangleq Compose(\text{Next1}, \text{Unch1}, \text{Next2}, \text{Unch2})$
 318 $\text{Unch12} \triangleq \text{Unch1} \wedge \text{Unch2}$
 319 $\text{Next123} \triangleq Compose(\text{Next12}, \text{Unch12}, \text{Next3}, \text{Unch3})$
 320 $\text{Unch123} \triangleq \text{Unch12} \wedge \text{Unch3}$
 321 $\text{Next1234} \triangleq Compose(\text{Next123}, \text{Unch123}, \text{Next4}, \text{Unch4})$
 322 $\text{Unch1234} \triangleq \text{Unch123} \wedge \text{Unch4}$
 323 $\text{Next12345} \triangleq Compose(\text{Next1234}, \text{Unch1234}, \text{Next5}, \text{Unch5})$
 324 $\text{Unch12345} \triangleq \text{Unch1234} \wedge \text{Unch5}$
 325 $\text{Next123456} \triangleq Compose(\text{Next12345}, \text{Unch12345}, \text{Next6}, \text{Unch6})$
 326 $\text{Unch123456} \triangleq \text{Unch12345} \wedge \text{Unch6}$
 327 $\text{Next1234567} \triangleq Compose(\text{Next123456}, \text{Unch123456}, \text{Next7}, \text{Unch7})$
 328 $\text{Unch1234567} \triangleq \text{Unch123456} \wedge \text{Unch7}$

330 $\text{vars} \triangleq \langle v1, v2, v3, v4, v5, v6, v7 \rangle$
